If you are not able to attend the in-person event on November 6, event materials and a recording of the presentation will be posted on the project's Let's Connect page.

Cherry Creek Waterworks District Conversion Study

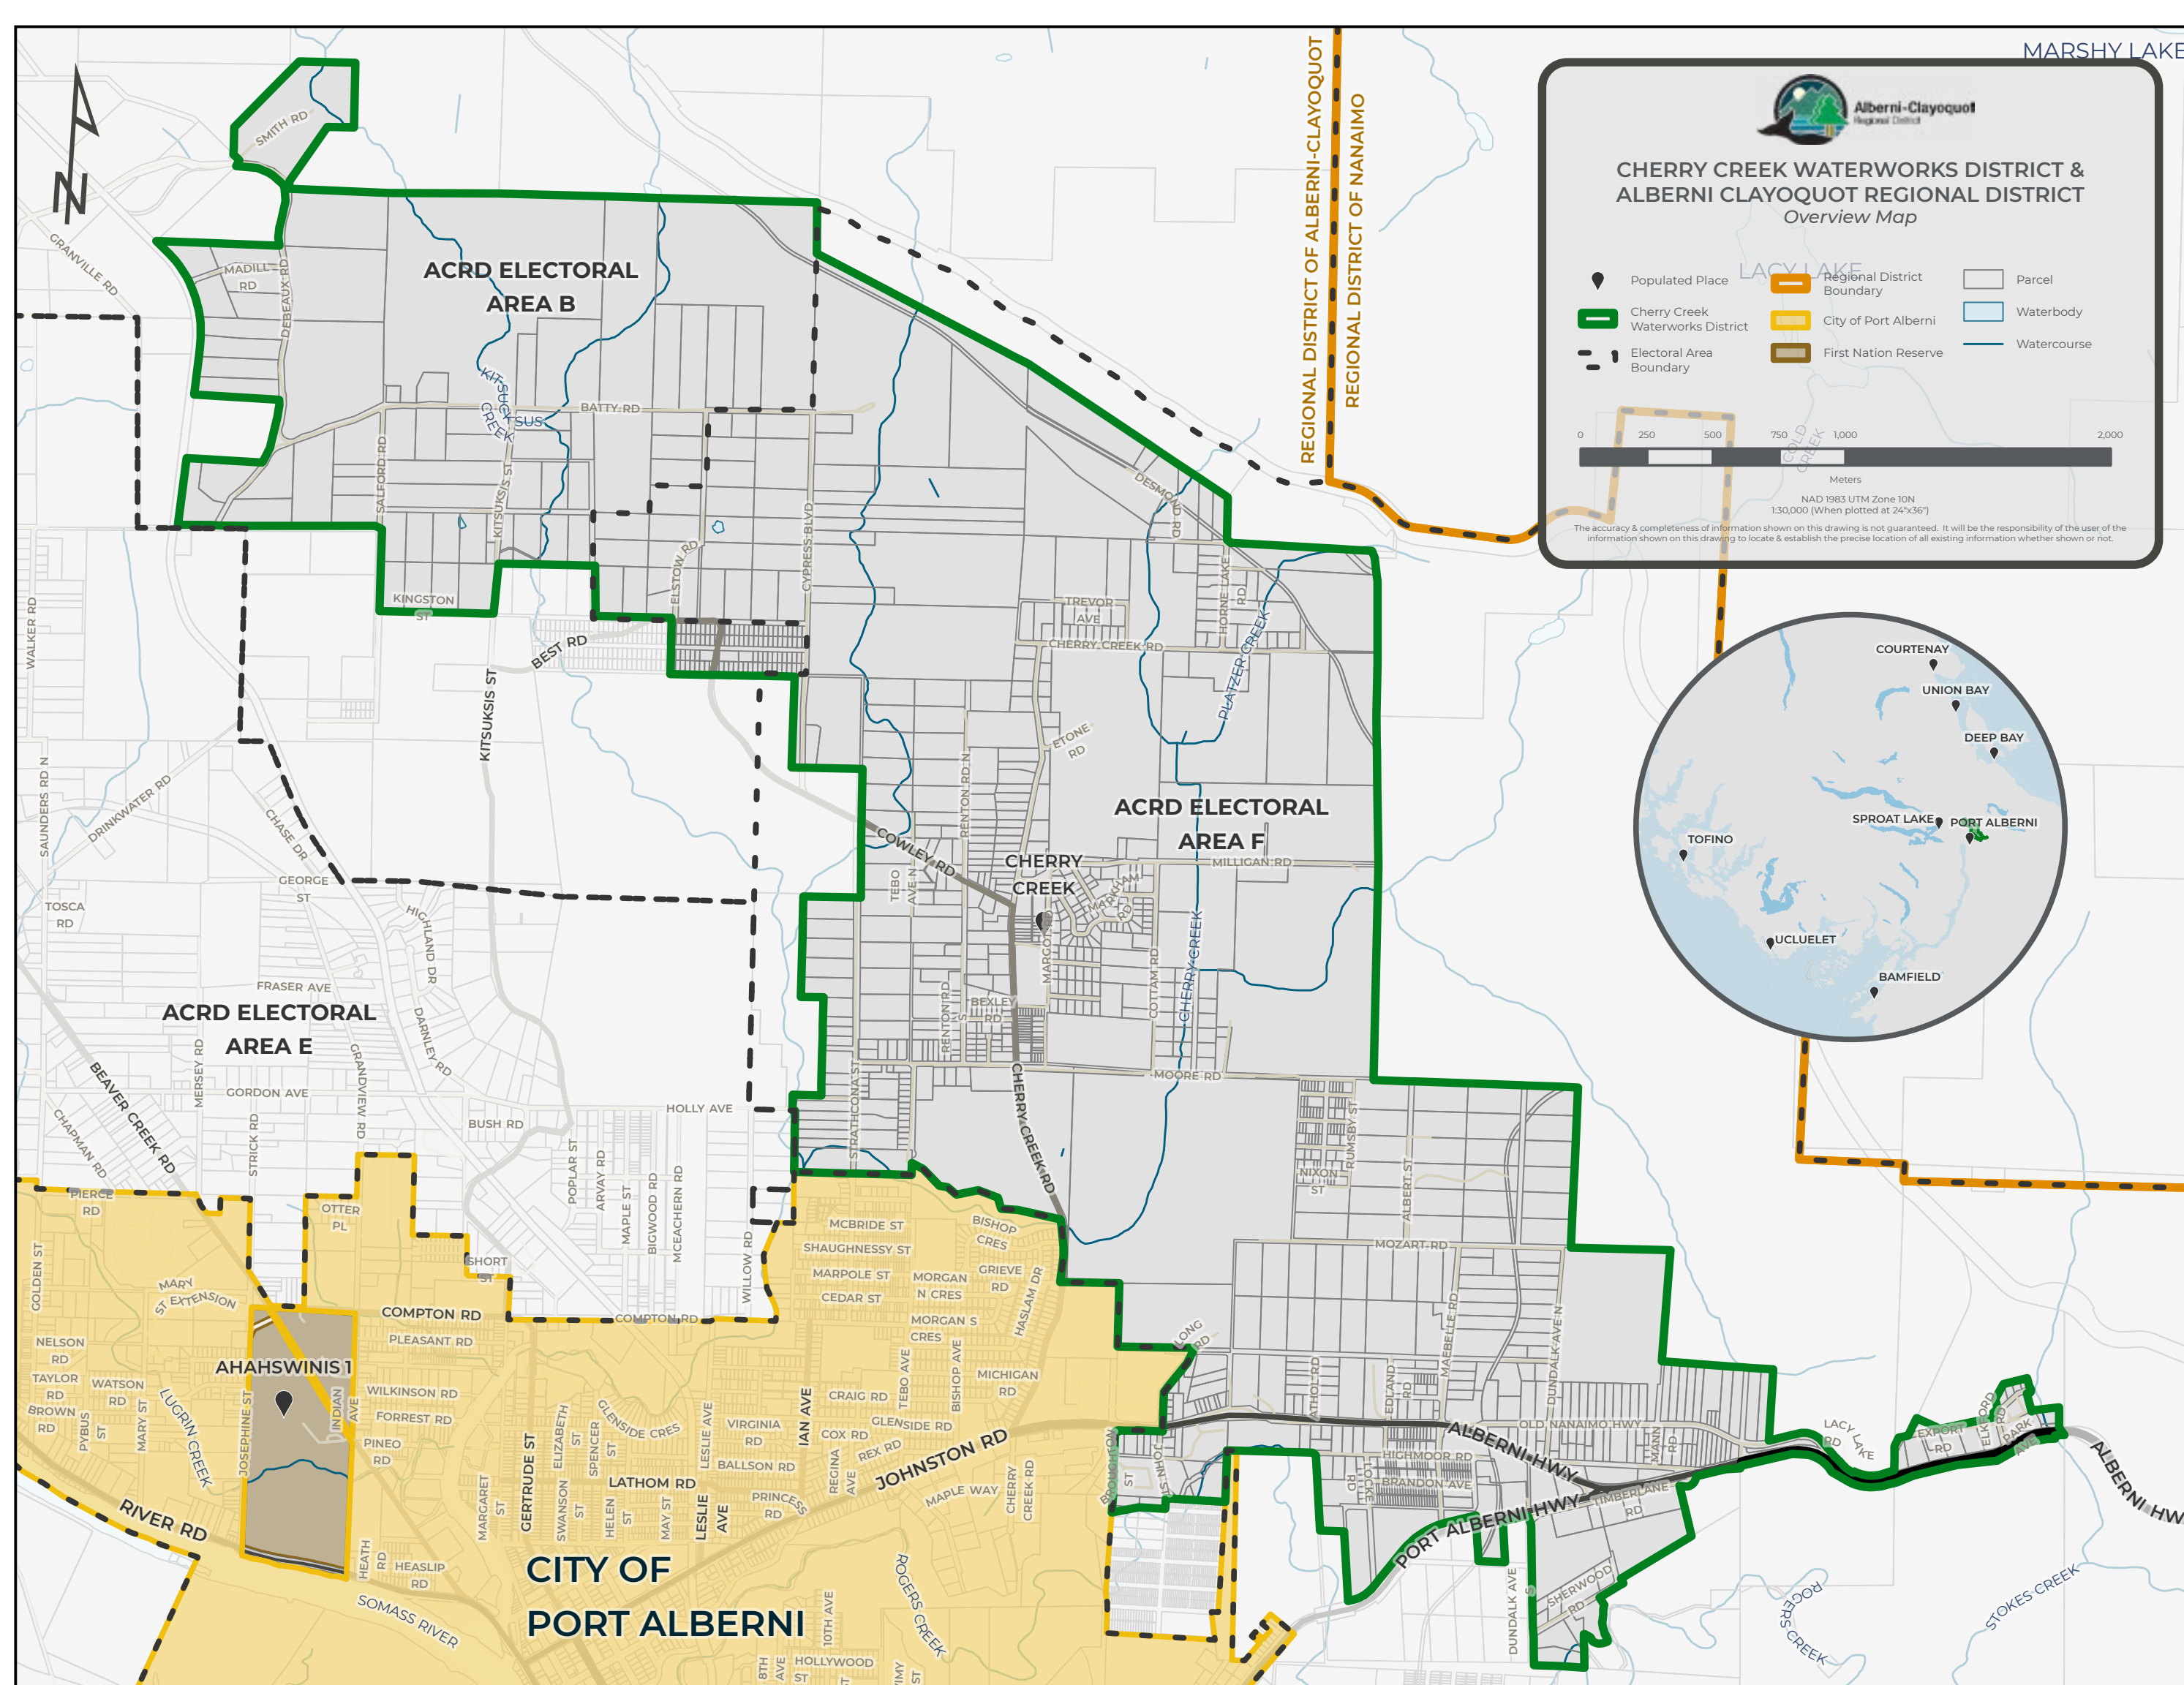

Conversion Study Process

- The Province of BC (through the Ministry of Municipal Affairs) has provided funding to the Alberni-Clayoquot Regional District (ACRD) to conduct a Conversion Study for the Cherry Creek Waterworks District (CCWWD)
- The study is a technical, unbiased review to compare the status quo with the potential conversion of water and fire services from the CCWWD to ACRD, based on a number of components:
 - Current operations, asset conditions, and future replacement requirements
 - Financial analysis and cost considerations
 - Other considerations (e.g. administrative, legal, political)
- Community engagement is a critical part of the process, including an open house and survey, to ensure that residents understand the potential pros and cons of conversion versus the status quo
- **The study does not include a referendum vote**, but should provide an indication of the level of community support to consider a potential vote in the future
